DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 2001-315256 (JP'256.) JP'256 teaches a flexible metal foil-clad laminate suitably used as a hard disc suspension board comprising a thermoplastic polyimide layer between two metal layers, such as two metal foils such as copper, stainless steel or aluminum, wherein the thermoplastic polyimide is heat resistant and is formed from the same diamines and dianhydrides as instantly claimed in mol percentages that read upon the claimed ranges, which would inherently possess the same properties as instantly claimed (Abstract; Claims; Paragraphs 15-40.)
3. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohta et al (WO01/28767, see English Equivalent USPN 6,998,455.) Ohta et al teaches a laminate comprising a polyimide layer or layers formed on a conductor such as a copper or stainless steel foil, wherein the polyimide exhibits a coefficient of linear hygroscopic expansion of $15 \times 10^{-6} \% \text{RH}$ or less, and is formed from diamines and tetracarboxylic acids as instantly claimed, including BPDA and PMDA with an example having the instantly claimed mol% of each, which would inherently possess the claimed properties, wherein the laminate may comprise conductor foils on both sides of the resin layer (Abstract; Col. 4-10, Examples.) With respect to Claims 5-8, though Ohta et al do not specifically teach that the double-clad laminate is a "suspension for a

hard disk drive”, the Examiner takes the position that this limitation in the preamble provides no additional material or structural limitations and given that the laminate taught by Ohta et al is capable of performing of the same, the laminate taught by Ohta et al reads upon Claims 5-8.
